

Alex Chen

Email: alex.chen@ucla.edu | GitHub: github.com/alexc-dev | Location: Los Angeles, CA

Education

University of California, Los Angeles (UCLA)

- B.S. in Computer Science: Sep 2023 – June 2027 (Expected)
- GPA: 3.92/4.00
- Relevant Coursework: Algorithms, Operating Systems, Database Systems, Distributed Systems.

Experience

FinTech Solutions | Software Engineering Intern

- June 2025 – Sep 2025 | San Francisco, CA
- Developed a real-time transaction monitoring dashboard using React and Tailwind CSS, deploying the frontend via AWS S3 and CloudFront for global low-latency access.
- Optimized SQL query performance by 32% on a PostgreSQL database containing 15M+ transaction records; achieved this by implementing partial indexing and rewriting nested joins into CTEs.
- Orchestrated a migration of internal reporting microservices to AWS EC2 instances using Docker, reducing environment setup time for new developers by 50%.

UCLA DevX | Full Stack Developer

- Oct 2024 – June 2025 | Los Angeles, CA
- Built an internal campus room-booking application using Next.js 14 and Supabase, managing a high-concurrency state for 500+ active student users.
- Implemented a custom caching layer to reduce API latency by 150ms during peak booking hours.
- Designed and documented a RESTful API schema that handled over 2,000 requests per day without downtime.

CodePath | Technical Mentor (Part-time)

- Jan 2026 – Present | Remote
- Providing technical guidance to 20+ students on iOS development fundamentals and system design patterns.
- Conducting weekly code reviews to enforce best practices in memory management and UI responsiveness.

Projects

Personal Portfolio & Infrastructure | Next.js, AWS, TypeScript

- Architected a headless CMS-based blog using a CI/CD pipeline that automatically deploys to AWS EC2 via GitHub Actions.
- Configured an AWS S3 bucket for asset hosting with specialized cache-control headers to achieve a 100/100 Lighthouse score.

Smart Pantry App | Python, Flask, OpenCV

- Created a computer vision tool that identifies grocery items via camera feed; integrated a Flask backend to manage inventory logic.
- Decoupled the image processing worker from the web server using a task queue,

ensuring the UI remains responsive during heavy computation.

Skills

- **Languages:** Python, C++, Java, JavaScript (ES6+), TypeScript, SQL.
- **Frameworks:** React, Next.js, Node.js, Express, Flask, Tailwind CSS.
- **Cloud & Tools:** AWS (S3, EC2, CloudFront), Docker, Git, PostgreSQL, MongoDB.
